Drezzy Stores Platform PRD

1. Document control

This PRD defines a single platform for Drezzy Stores: a customer storefront (web first, then installable app) and a staff dashboard that runs sales, sourcing, delivery, money records, targets and reporting from one database. Developers should treat it as the source of truth for scope, and raise anything unclear through the open questions in section 27.

Item	Detail
Product	Drezzy Stores Platform (storefront, staff dashboard, Drip School content hub)
Version	0.2, with the product owner's answers applied
Product owner	Drezzy Stores management
Audience	Developers, UI designer, QA, and the Drezzy management team
Primary market	Ghana first, with delivery from the Accra and Kumasi branches. The platform is built so it can sell worldwide later
Currency and language	Ghana cedi (GHS) and English only. Other currencies come with international selling (phase 3)

How to read it. Every requirement has an ID and a priority. P0 means required for the first public launch (MVP). P1 means the next release. P2 means later. Decisions marked DEFAULT are agreed starting points that the owner can change later. Facts taken from Drezzy's social pages and design files are marked as observed. The few decisions still open are in section 27.

2. Business context: Drezzy Stores today

Drezzy Stores is an early-stage Ghanaian outfits business that leads with sneakers, sells outfits and watches, and sources every order from trusted suppliers instead of holding stock. It sells through social media and WhatsApp, delivers nationwide from Accra and Kumasi, and aims to sell worldwide. The details below come from Drezzy's social pages, its design files and the owner's answers.

Brand voice. The bio reads "Your Outfits Solution. You Order, We Deliver, You Drip. Order Now. Delivery Nationwide." Flyers carry the line "Dress with ease". The content leans on confidence and style (for example "Invest in your wardrobe today, watch your confidence grow tomorrow" and "Quality never goes out of style"). That makes Drezzy a lifestyle brand as well as a shop, which is why the platform includes Drip School, its style and education hub.

Social presence (observed).

Channel	Handle	What the pages show
Instagram	@drezzy_stores	Clothing shop, 10 posts, 86 followers. Story highlights: Men, Reviews, Outfits, Ladies, New. Bio links to a WhatsApp catalogue and Threads
TikTok	@drezzy.stores	26 followers, 48 likes, 1 video (753 views), WhatsApp number in bio
Snapchat	drezzystores	Category Clothing/fashion, sneaker flyers and outfit sets
WhatsApp	Business catalogue and chat	The main ordering channel. Accra: call 054 899 6648, WhatsApp 050 131 5862. Kumasi: call or WhatsApp 055 355 7347

What Drezzy sells (stated and observed).

- Sneakers lead the range, for men and for ladies. The ladies range is sneakers only. There are no kids' items.
- Outfits (sets, tops, bottoms) and watches.
- Every product is original and brand new.
- Products are described by name, brand, colours available and sizes available. Some sneakers come in model variants of the same shoe, such as Low, Mid and High.
- Observed prices: Air Jordan 1 Retro High OG "Triple Black" GHS 400, Air Jordan 4 Retro "Red Patent" GHS 400, New Balance 2000 GHS 450.

How the business runs (stated).

- **Sourcing.** Drezzy does not keep stock at the moment. When a customer orders, Drezzy sources the item from trusted suppliers and wholesalers.
- **Branches.** Accra and Kumasi are the two key branches. They are operating bases for sales and delivery, not stockrooms.

- **Payment.** Customers pay before delivery. In Accra, a customer may pay half at checkout and the other half on delivery. Outside Accra, the full amount is paid at checkout.
- **Delivery.** Drezzy's own riders and courier services deliver, so delivery times depend on them.
- **Returns.** There is no return policy yet. One will be considered later.
- **Records.** The product list is kept in Excel today. There is no single customer database, no order status for the buyer, and no way to tell which channel produced a sale.
- **Registration.** Drezzy Stores is not yet a registered business. Payments go to a personal MTN MoMo account for now.

Brand identity (from the design files). The logo is the word DREZZY set in Officer Domenic, a heavy display face, with "Stores" underneath in Neulis Alt, widely spaced. Product flyers place the item on a large rounded card over oversized DREZZY letters used as a faint watermark, with a lime or navy size badge and a navy contact panel. Variants seen: navy, light grey, electric blue, and a white and red template. Section 23 turns this into a design system.

3. Problem, vision, goals and success metrics

Problem. Drezzy sells through WhatsApp, calls and direct messages, keeps its product list in Excel, and cannot see which channel produced a sale or where an order is once it leaves. Because every order is sourced from a supplier after the customer pays, the team also needs to track what is available, what was ordered from whom, and what each order cost. That works at 10 orders a week and breaks at 100. Customers also get no guidance beyond a flyer, although the brand promise is "Your Outfits Solution".

Vision. One platform where a customer can discover a look, learn how to wear it in Drip School, pay with mobile money, and watch the order arrive, while the team runs the catalogue, sourcing, delivery, money records, targets and reporting from the same data.

Goals and measures. Percentages below are starting targets (DEFAULT) to be reset after 60 days of real data.

ID	Goal	How we measure it	Starting target
G1	Bring orders into one system	Share of orders created on the platform, including staff-entered WhatsApp orders	90% within 90 days of launch

ID	Goal	How we measure it	Starting target
G2	Only sell what can be sourced	Paid orders cancelled because no supplier could provide the item	Under 3% of paid orders
G3	Customers can see order progress	Orders with a full status timeline; "where is my order" messages per 100 orders	100% of orders; 50% fewer messages
G4	Know what brings customers in	Orders with the "how did you get to know Drezzy" answer	95% of orders
G5	Staff accountability	Staff with an active target; daily report completion	100% with a target; 90% completion
G6	Know the money	Months closed with every sale, supplier cost and expense recorded	Every month from launch
G7	Grow repeat business	Repeat purchase rate within 90 days	Baseline first, then set
G8	Build the brand as a style guide	Drip School visits that lead to a product view	Baseline first, then set

Out of scope for launch. A marketplace for other sellers, a resale or authentication service, a Drezzy-owned delivery fleet, point-of-sale hardware, payroll processing (the platform keeps salary records but does not pay salaries), and staff attendance or shift tracking. International shipping and other currencies are planned for phase 3.

4. Users, personas and roles

Customer personas (to validate with order history).

Persona	Who they are	What they need from Drezzy
The Sneaker Hunter	Men and women, 18 to 30, follow drops on Instagram and TikTok, know models and sizes	Fast search by model and size, honest availability and delivery time, drop alerts, clear photos, mobile money checkout
The Outfit Seeker	20 to 35, wants a complete look for campus, work, church, dates or events but is unsure what goes together	Drip School guides, shop-the-look bundles, size help, trust signals

Persona	Who they are	What they need from Drezzy
The Gift or Bulk Buyer	Buys for someone else, or several pairs at once	Delivery to a different receiver, order notes, clear delivery time, easy contact with a person
The Out-of-Town Buyer	Lives outside Accra, including Kumasi and the regions	Honest delivery fee and time by region, tracking, a clear explanation of why payment is in full before delivery

Staff and partner roles. DEFAULT team: one Owner, two Admins, and other people by role. Roles are managed by an Owner or Admin and enforced on the server, not only hidden in the interface.

Role	Main job	Typical day in the dashboard
Owner	Full control, sets strategy, targets and pay	Reviews sales, money, targets, alerts
Admin or Manager	Runs daily operations, manages staff and targets	Approves orders, reassigns, reviews reports
Sales Agent	Handles WhatsApp, calls and walk-ins, creates orders	Creates orders, follows up leads, tracks own target
Sourcing Officer	Keeps the catalogue and availability accurate and places supplier orders	Updates availability, orders from suppliers, checks items on arrival
Dispatch Coordinator	Moves orders to customers	Packs, assigns riders or couriers, updates delivery stages, records balances collected
Content Editor	Publishes Drip School articles, banners and pages	Writes, schedules, checks content performance
Customer Support	Resolves issues and cancellations	Replies to customers, updates orders, requests refunds
Finance	Keeps money records	Records expenses and salaries, reconciles MoMo payments and balances, closes the month
Partner (P1)	Rider, courier agent or affiliate with limited access	Sees only assigned jobs and own targets

Permission matrix. F = full, E = create and edit, V = view, O = own records only, dash = no access.

Module	Owner	Admin	Sales	Sourcing	Dispatch	Content	Support	Finance
Products and categories	F	F	V	E	V	V	V	V
Availability and supplier orders	F	F	V	F	V	-	V	V
Orders	F	F	O (create, edit)	V	E (status, delivery, balance)	-	E	V
Cancellations and refunds	F	F	-	-	-	-	E (request)	E (approve if allowed)
Customers	F	F	O	-	V (delivery fields)	-	E	V
Staff records and roles	F	E	-	-	-	-	-	-
Salary records	F	-	-	-	-	-	-	E
Expenses, inflow and outflow	F	V	-	E (supplier costs)	E (delivery costs)	-	-	F
Set targets	F	F	-	-	-	-	-	-
View targets and own progress	F	F	O	O	O	O	O	O
Analytics and KPIs	F	F	O	V (catalogue)	V (delivery)	V (content)	V (service)	V (money)
Content and Drip School	F	F	-	-	-	F	-	-
Data export	F	E	O	E (catalogue)	-	-	-	E
Settings, integrations, templates	F	E	-	-	-	-	-	-
Audit log	F	V	-	-	-	-	-	V

Requirement **FR-ROLE-001 (P0):** an Owner can create custom roles by choosing permissions per module (view, create, edit, delete, export). **FR-ROLE-002 (P0):** every sensitive action (price change, availability change, refund, export, role change, target

change, salary or expense entry) is written to the audit log with who, when, old value and new value. **FR-ROLE-003 (P0):** salary records are visible only to the Owner and Finance, and Admin cannot grant that access.

5. Research: who has built something like this

No single business combines sneaker retail, mobile money checkout, a live order tracker, staff targets and an editorial hub for the Ghanaian market, so Drezzy borrows the best part of several. The table groups 16 platforms by how relevant they are. Details come from each company's own public pages (see section 28 for the full source list); anything not found on a public page is marked "not seen" elsewhere in this PRD, which does not prove it is absent.

Platform	Where	What it is	What Drezzy should take from it
Jumia Ghana	Ghana, part of a pan-African group	Marketplace with door delivery or pickup stations, tracking by email link or My Orders page, JumiaPay for cards, mobile wallets and cash on delivery	Saved delivery addresses, a public tracking page, a choice between home delivery and pickup, clear fees by zone. Its seller delivery network lists 120+ pickup points across 16 regions, which shows how far a pickup option can reach
Sneakers Don	Kaneshie, Accra	Sneaker shop with a physical store and an online shop, nationwide delivery, exchange and support promises on its site	The closest local peer. Compete on tracking, honest availability and content, not only price
Shopwice	Adabraka, Accra (online only)	Online store with WhatsApp ordering, mobile money, cards and cash on delivery	Offer every payment route Ghanaians expect, and keep a WhatsApp order button

Platform	Where	What it is	What Drezzy should take from it
Decathlon Ghana	Accra malls	Sports retailer with 2-hour store pickup, home delivery through Skynet, Satchel, Yango and Bolt, order cut-off time, online payment or cash on delivery	A real example of courier mix, cut-off rules and order holding rules that Drezzy can copy into its delivery settings
Kantamanto and TikTok sneaker sellers	Accra and Kumasi	Sellers who run their shop from TikTok and WhatsApp, advertise "nationwide delivery" and "payment on delivery"	Drezzy's day-to-day rivals. Speed, trust and a smooth way to order from a video are what they compete on
Hubtel	Accra	Payments company, Bank of Ghana approved payment services provider, with a marketplace and delivery	An alternative payment partner, and a reminder that local super-apps also list sellers
Bathu	South Africa	Local sneaker brand with 30+ stores and a strong online shop. A Shopify case study reports a 26% revenue rise after it unified online and store inventory	One inventory for every channel, collections and edition drops, customer stories on the site
KEEXS	Lagos, Nigeria	African-inspired sneaker brand sold online and in stores. Each design has a story, with limited editions	Storytelling per product, limited editions, a size guide

Platform	Where	What it is	What Drezzy should take from it
GOAT	United States	Sneaker marketplace and app with authenticity checks, price-drop and restock alerts, offers and augmented reality try-on	Restock and price alerts, trust signals, clear fees
Nike SNKRS	United States	Nike's launch app with a release calendar, notify-me reminders, draws, stories and local discovery	Drop calendar, reminders and a content feed around launches
Culture Kings	Brisbane, Australia	Streetwear retailer built on community, weekly drops, in-store events, a loyalty programme and style sessions	Make the brand a culture, not just a shop. Loyalty and styling advice
Highsnobiety	Berlin, Germany	Publisher that mixed shoppable articles with a multi-brand shop, then closed its retail arm at the end of 2025 to refocus on publishing	Content drives commerce well, but running a broad multi-brand shop is hard. Drezzy should link content to its own catalogue
Zalando	Berlin, Germany	Fashion app with Shop the Look, wishlist price and restock alerts, size advice, creator boards, trend feed and a styling assistant	Complete-the-look bundles, wishlist alerts, size advice

Platform	Where	What it is	What Drezzy should take from it
Stitch Fix	United States	Style quiz that builds a style profile, then a personalised shop, with thumbs-up or down on styles	A short style quiz that saves sizes and taste for better recommendations
Shopify	Canada	Commerce back office: inventory by bulk edit or barcode, transfers between locations, staff roles and an activity log	The standard to match for inventory, roles and audit trails, before adding Drezzy's own target tracking
Paystack	Nigeria, operating in Ghana	Payment gateway supporting MTN MoMo, Telecel Cash, AirtelTigo Money, Visa, Mastercard and Apple Pay in Ghana, plus shareable payment links and QR codes	The recommended payment route, including payment links staff can send on WhatsApp

Delivery partners in Ghana worth integrating or contacting: Skynet Express (all 16 regions, e-commerce and cash on delivery services, parcel tracking number, a Kumasi branch since 2002), ShaQ Express (nationwide, live tracking and proof of delivery, warehousing) and SCS Delivery (16 regional capitals, pickup and drop-off points).

6. Feature benchmark

The gap Drezzy can own is the combination of local payment habits, honest availability, a visible order tracker, editorial style guidance, and a back office that tracks people against targets. "Not seen" means the feature was not visible on the public pages reviewed, not that it is absent. Staff dashboards are private for most of these companies, so back-office benchmarks come from Shopify's public documentation only.

Platform	Order tracking	MoMo or cash on delivery	One catalogue for all channels	Drops and alerts	Style content	Personalisation
Jumia Ghana	Yes	Yes	Marketplace	Not seen	Not seen	Not seen

Platform	Order tracking	MoMo or cash on delivery	One catalogue for all channels	Drops and alerts	Style content	Personalisation
Sneakers Don	Not seen	Not seen	Not seen	New arrivals shown	Not seen	Not seen
Shopwice	Not seen	Yes	Not seen	Not seen	Not seen	Not seen
Decathlon Ghana	Not seen	Yes	Partial (2-hour store pickup)	Not seen	Some guides	Not seen
Bathu	Not seen	Not seen	Yes	Editions and collections	Customer stories	Not seen
KEEXS	Not seen	Not seen	Not seen	Limited editions	Design stories	Not seen
GOAT	Yes	Not applicable	Marketplace	Yes (price and restock)	Curated collections	Partial
Nike SNKRS	Not seen	Not applicable	Not applicable	Yes (calendar, draws)	Stories	Partial
Culture Kings	Not seen	Not seen	Not seen	Weekly drops	Style sessions	Loyalty programme
Zalando	Not seen	Not seen	Not seen	Wishlist alerts	Yes (outfits, trends)	Yes
Stitch Fix	Not seen	Not applicable	Not applicable	Not seen	Style types	Yes (quiz)
Highsnobiety	Not seen	Not applicable	Not applicable	Not seen	Yes (shoppable articles)	Not seen
Drezzy (target)	**Yes, with a progress bar**	**Yes (MoMo, card, half payment in Accra)**	**Yes (one catalogue)**	**Yes (drop calendar, availability alerts)**	**Yes (Drip School)**	**Yes (style quiz, saved sizes)**

Seven lessons that shape this PRD.

1. Local rivals win on speed and trust, so checkout must take under two minutes and show a human contact (WhatsApp) at every step.
2. Mobile money is the default way to pay, so it must be first in the payment list, not hidden behind cards.
3. Bathu's gain came from one inventory across channels, so Drezzy's catalogue and availability must be one source of truth shared by the storefront and every staff member.
4. Restock and price alerts (GOAT, Zalando) turn a sold-out page into a future sale.

5. Highsnobiety's retail exit is a warning against becoming a general multi-brand store. Keep content tied to Drezzy's own catalogue.
6. A short quiz (Stitch Fix) can capture size and taste once and make every later visit faster.
7. Courier choice is a business decision. Skynet, ShaQ Express, SCS, Yango and Bolt are all in use, so the platform should record any courier and tracking number rather than lock in one.

7. Scope and release plan

The MVP replaces WhatsApp-and-Excel operations and gives customers a shop, a tracker and Drip School. Phase 2 adds retention and automation. Phase 3 adds native apps and international selling. Priorities: P0 = MVP, P1 = phase 2, P2 = phase 3.

Area	P0 (MVP)	P1 (phase 2)	P2 (phase 3)
Storefront	Home, categories, search and filters, product page with style, colour and size, availability and delivery time per item, cart, wishlist, guest and account checkout, WhatsApp help button, sale prices for discount days, installable web app (PWA)	Shop the Look bundles, style quiz, limited drops with a cap per customer and a drop calendar, notify-me, reviews with photos, coupons, recently viewed	AI stylist assistant, visual search
Checkout and payment	Paystack (MoMo and cards), full payment for all regions, half-now-half-on-delivery option for Accra addresses, delivery details with location, "how did you get to know Drezzy" question, order progress bar, public tracking page	Saved MoMo number, address autocomplete, Ghana Post GPS validation	Other currencies and international cards at scale

Area	P0 (MVP)	P1 (phase 2)	P2 (phase 3)
Customer account	Sign up and sign in, profile, addresses, sizes, order history with balance due, wishlist, notification settings	Phone OTP login, referral code, loyalty points	Native app login with biometrics
Drip School	Articles, guides, trends and how-tos with live product cards	Outfit boards, customer style spotlights, newsletter digest	Creator and affiliate content
Staff dashboard	Role-based login, orders, catalogue, customers, staff records, exports, audit log	Partner portal for riders and affiliates	Point of sale mode for a physical shop
Catalogue and sourcing	Excel import, availability per size, suppliers and supplier cost, supplier orders linked to customer orders, live storefront sync	Supplier performance report, price lists per supplier	Optional held stock with a stock ledger per branch, for when Drezzy starts keeping stock
Money records	Sales inflow from payments, expenses and supplier costs, balances to collect, monthly cash-flow summary	Salary records, profit report by month and branch, budgets	Accounting software export
Targets and KPIs	Targets by person and role, daily and weekly check-ins, KPI cards, progress bars	Pace alerts, scorecards, weighted targets, leaderboard switch	Forecasting, incentives and commission calculator
Analytics	Sales, orders, funnel, source and "how did you get to know Drezzy" report, delivery performance	UTM builder, cohort and repeat-customer reports, scheduled report emails	Predictive demand, customer lifetime value models

Area	P0 (MVP)	P1 (phase 2)	P2 (phase 3)
Notifications	Email and in-app, plus WhatsApp click-to-chat links	Automated WhatsApp and SMS messages	Push notifications in the app
Mobile and reach	Mobile-first responsive web, PWA install	Capacitor wrapper build for Android	Play Store and App Store release, push, international shipping

8. Customer storefront requirements

The storefront must feel like Drezzy's Instagram: big product images, bold type, quick to scan on a phone, and one tap from interest to buying.

Categories (DEFAULT). Admins manage a two-level category tree. Seed list: Sneakers (Men, Ladies), Shoes (formal, casual, loafers), Slides and Sandals, Outfits (sets, tracksuits, tops, bottoms), Watches, Accessories (caps, bags, socks). The ladies range is sneakers only. There are no kids' categories. Each product has one main category and optional tags (Men, Ladies, Unisex, Streetwear, Occasion).

Availability, not stock. Drezzy sources each order from suppliers, so the storefront never claims an item is "in stock". It shows availability and how long delivery takes: Available (supplier confirmed it can supply), Limited (few left at the supplier), Unavailable (hidden from purchase, Notify me in P1), and Pre-order (expected on a date). Each available size shows an estimated "ready to deliver in" time that adds the supplier lead time to the delivery time for the customer's region.

ID	Requirement	Priority
FR-SF-001	Home page with announcement bar, hero banner, category tiles, New Arrivals, Best Sellers, a Drip School strip, a customer reviews strip, and a delivery promise bar	P0
FR-SF-002	Category and collection pages with grid view, filters (category, brand, size, colour, price range, availability, men or ladies) and sort (newest, price, popular)	P0

ID	Requirement	Priority
FR-SF-003	Product page: image gallery with zoom and short video, name, brand, price in GHS, style switcher (for example Low, Mid, High) where the product has one, colour swatches, size selector showing availability per size, "Brand new, original" label, description, delivery time by region, size guide link, share, wishlist, and "Ask on WhatsApp" button that pre-fills the product link	P0
FR-SF-004	Availability states per size as described above, with the estimated delivery time. Unavailable sizes stay visible but greyed out	P0
FR-SF-005	Search with type-ahead, spelling tolerance, search by model name, brand or SKU, and a useful empty state with suggestions	P0
FR-SF-006	Cart as a slide-in drawer and a full page: change quantity or size, remove, see delivery fee estimate, subtotal and total in GHS	P0
FR-SF-007	Wishlist for guests (device) and for accounts, with availability and price-drop alerts (P1)	P0 (list), P1 (alerts)
FR-SF-008	Sale prices: a compare-at price and a scheduled start and end, so the team can run discount days	P0
FR-SF-009	Coupons with rules (percentage or amount, minimum spend, dates, usage limits)	P1
FR-SF-010	Limited drops: a release date and time, a countdown, a cap per customer, and a drop calendar with Notify me	P1
FR-SF-011	Shop the Look: an outfit page that shows the full look and lets customers add all items or swap alternatives	P1
FR-SF-012	Recently viewed, related products and "customers also bought"	P1
FR-SF-013	Reviews and ratings from verified buyers, with optional photo, moderated by staff. Existing customer reviews from the Instagram Reviews highlight can be published where the customer has agreed	P1

ID	Requirement	Priority
FR-SF-014	Footer pages managed in the CMS: About, Delivery, Payment options, Order issues and refunds, Size Guides, FAQ, Contact, Terms, Privacy	P0
FR-SF-015	SEO: server-rendered pages, clean URLs, product structured data, social sharing images, sitemap, so product links preview well when shared on WhatsApp and Instagram	P0
FR-SF-016	Image rules: 4:5 product ratio (matches Instagram), WebP or AVIF with fallback, lazy loading, minimum 1200 px on the long side, alt text	P0
FR-SF-017	Social proof: link or embed Instagram and TikTok posts	P1
FR-SF-018	Floating WhatsApp help button on all pages, using the Accra or Kumasi number based on the customer's region where known	P0

Product fields the storefront must be able to show: name, brand, SKU, category, men or ladies, style option (Low, Mid, High where used), colourway, sizes (EU as default, with UK and US conversion in the size guide), price, compare-at price, condition (Brand new, original), material, description, images, video, care notes, delivery notes, and tags.

9. Cart, checkout, payment and order tracking

Checkout is one page with collapsible steps, designed for a phone, and should take under two minutes for a returning customer. Guests can check out without an account and are invited to create one on the confirmation page.

Payment rules (stated by the owner).

Delivery address	What the customer pays at checkout	What is paid on delivery
Accra delivery zone	Choice of the full amount, or half of the order total	Nothing, or the other half
Anywhere outside Accra, including Kumasi	The full amount	Nothing

- The Accra zone is a setting the Admin controls. DEFAULT: Greater Accra Region.

- The half-payment option also applies to pickup at the Accra branch.
- The delivery fee is part of the amount paid at checkout. A zone can instead be marked "fee paid to the courier on arrival" for courier routes with variable prices, and checkout then says so clearly.
- Delivery itself depends on Drezzy's riders and couriers, so times shown are estimates.

Checkout steps.

1. **Contact:** full name, phone number (international format, +233 by default, required), email (required for receipts), and receiver name and phone if the order is a gift.
2. **Delivery location:** country (Ghana only at launch), region, city or town, area, street or landmark, a note for the rider, optional Ghana Post GPS address, and a "use my current location" pin (P1). Pickup at the Accra or Kumasi branch is a choice where the branch offers it.
3. **Delivery method and fee:** the fee and estimated delivery time come from the zone table and the supplier lead time for the items.
4. **Payment plan:** shown only for Accra addresses. "Pay in full now" or "Pay half now, half on delivery", with both amounts spelled out.
5. **Payment method:** MTN MoMo, Telecel Cash, AirtelTigo Money, and cards, handled on Paystack's hosted checkout so Drezzy never stores card details or PINs. While Paystack is not yet active, a Manual MoMo option shows the Drezzy MoMo number and the order reference, and asks for the transaction ID.
6. **"How did you get to know Drezzy Stores?"** A required single-choice list: Instagram, Facebook, TikTok, Snapchat, X (Twitter), Threads, WhatsApp status or channel, Google search, YouTube, Friend or relative, Referral (asks for the referrer's name or code), Influencer (asks for name), Walk-in or saw you in person, Flyer or poster, Other (free text). The answer is stored on the order and the customer profile and feeds section 16.
7. **Review and place order:** line items, delivery details, fee, total, amount due now, balance due on delivery, terms checkbox, and the Pay button.

ID	Requirement	Priority
FR-CO-001	Orders are created with status Awaiting Payment. Nothing is ordered from a supplier until the amount due now is confirmed	P0
FR-CO-002	Paystack payments are confirmed by the Paystack webhook, verified by signature and made idempotent, never by the browser redirect alone. The server checks the amount against the order	P0

ID	Requirement	Priority
FR-CO-003	If a mobile money prompt times out or fails, the customer sees a plain message with Retry and Try another number. The order and cart are kept	P0
FR-CO-004	Half payment: the order stores amount paid, balance due and who must collect it. The balance shows on the order page, the tracker, the packing slip and the rider's job	P0
FR-CO-005	An order with a balance cannot be marked Delivered until the balance is recorded as collected (MoMo reference or cash), unless an Admin overrides with a reason	P0
FR-CO-006	Manual MoMo payment: the order waits in "Payment pending check" until Finance or an Admin matches the transaction ID to the MoMo statement and confirms it. Duplicate transaction IDs are rejected	P0
FR-CO-007	Staff can create an order for a customer who ordered on WhatsApp, phone or in person. The order records the channel and the staff member who gets credit	P0
FR-CO-008	Staff can generate a Paystack payment link (or show a payment QR) for an order or a balance, and copy it into WhatsApp	P0
FR-CO-009	The "how did you get to know" answer is required on web checkout and optional on staff-created orders	P0
FR-CO-010	Order confirmation page and email show the order number, summary, amount paid, balance due and tracking link	P0
FR-CO-011	If an item cannot be sourced after payment, the customer is offered an alternative or a full refund of what they paid, and the order records the outcome	P0
FR-CO-012	Save the payer's mobile money number for next time, only with consent	P1

ID	Requirement	Priority
FR-CO-013	Address autocomplete and Ghana Post GPS validation	P1

Order progress bar (the customer's tracker). It appears on the order page in the account, in every status email, and on a public tracking page opened with the order number plus the phone number, with no login needed.

Step	Customer label	Who or what moves it	Shown to customer
1	Order placed	System on order creation	Time placed
2	Payment confirmed	Paystack webhook, or Finance for manual MoMo	Amount paid and any balance due
3	Confirmed by Drezzy	Sales Agent or Admin	First name of the team member
4	Getting your item from our supplier	Sourcing Officer, when the supplier order is placed	Expected ready date
5	Checked and packed	Dispatch Coordinator, after checking size, colour and condition	Time
6	Dispatched	Dispatch Coordinator	Rider or courier name, phone, tracking number if any
7	Out for delivery	Dispatch or rider	Estimated arrival window, balance to pay if any
8	Delivered	Rider or Dispatch, with delivery code or photo proof (P1)	Time received, balance collected

Exceptions appear as clear banners on the bar: Cancelled, Payment failed, Item could not be sourced (with the alternative or refund), Delivery attempt failed (with a reschedule button), Refunded.

Rules: **FR-TR-001 (P0)** each step has a timestamp and the staff user who set it. **FR-TR-002 (P0)** a step can only move forward in sequence, and only an Admin can move an order backwards, with a required reason. **FR-TR-003 (P0)** every step change sends the

customer an email (and a WhatsApp or SMS message in P1) using editable templates. **FR-TR-004 (P0)** the customer can ask for help from the tracking page, which opens WhatsApp with the order number filled in.

10. Customer account and profile

Customers can sign up, sign in and manage their own space, called My Drezzy. Accounts are optional for checkout but rewarded: faster checkout, order history, saved sizes and wishlist alerts.

ID	Requirement	Priority
FR-ACC-001	Sign up and sign in with email and password, and with Google. Email verification link sent on sign up	P0
FR-ACC-002	Password reset by email link that expires in 60 minutes and works once	P0
FR-ACC-003	Sign in with phone number and a one-time code by SMS	P1
FR-ACC-004	Profile: name, phone, email, birthday (optional), gender (optional), saved shoe size in EU and clothing size, style tags	P0
FR-ACC-005	Address book with a default delivery address and labels (Home, Work, Receiver)	P0
FR-ACC-006	Order history with the progress bar and any balance due for each order, reorder button, invoice download as PDF	P0
FR-ACC-007	Wishlist with alerts when an item becomes available again or drops in price	P0 (list), P1 (alerts)
FR-ACC-008	Notification settings: choose email, SMS, WhatsApp, and which topics (orders, drops, Drip School, offers). Order updates cannot be switched off	P0
FR-ACC-009	Referral code to share, with a record of who joined and bought through it	P1
FR-ACC-010	Loyalty points balance and history	P1

ID	Requirement	Priority
FR-ACC-011	Data rights page: download my data, correct my data, delete my account, withdraw marketing consent. Requests are logged and answered by staff within a set time	P0
FR-ACC-012	Guest order claim: after a guest order, the same phone number or email can create an account and see past orders	P0
FR-ACC-013	Security: rate-limited sign-in, lockout after repeated failures, session list with sign out everywhere	P0

My Drezzy layout. Orders, Wishlist, Saved Sizes and Style, Addresses, Rewards (P1), Notifications, Account Settings. On a phone these sit behind one Account tab in the bottom navigation.

11. Inspiration hub: Drip School

Drip School is where "Your Outfits Solution" becomes real. It teaches people how to dress, shows what is trending, and links every look to products Drezzy can supply. The name ties to the "You Drip" line in the bio. Highsnobiety shows that shoppable articles can drive sales, and its retail exit shows the content should serve Drezzy's own catalogue rather than a wide one.

Content types.

Type	Example for Drezzy	Why it earns its place
Outfit guides	"5 ways to wear Nike Dunks", "Church Sunday looks under GHS 800"	Turns browsing into baskets with several items
Trend reports	"What Accra and Kumasi are wearing this month"	Brings people back, builds authority
How-to and education	Sneaker care, how to find your size, how to match colours, fabric basics	Fewer wrong sizes, more trust
Occasion lookbooks	Campus, wedding guest, date night, office casual, Detty December	Matches how customers actually shop

Type	Example for Drezzy	Why it earns its place
Drop news	New arrivals, limited drops, how Drezzy picks its suppliers	Creates urgency and a story
Customer spotlights	Reviews turned into a gallery, with permission	Real people, real proof
Gift guides	Valentine's, Christmas, graduation	Seasonal sales
Style quiz (P1)	"Find your Drezzy style" in 6 questions	Saves sizes and taste, personalises the home page

ID	Requirement	Priority
FR-JR-001	Drip School home with featured story, category tabs, search and tag filters	P0
FR-JR-002	Article page with hero image, reading time, author, share buttons, table of contents for long guides, and related stories	P0
FR-JR-003	Embedded product cards inside articles that show live price and availability and a View or Add to bag button	P0
FR-JR-004	Shop the Look block: a set of products shown on one outfit image with tap points (P1) and an Add all to bag button	P1
FR-JR-005	Embed support for Instagram, TikTok and YouTube videos, with a privacy-friendly click-to-load	P0
FR-JR-006	Editorial workflow: Draft, In review, Scheduled, Published, with preview links and version history	P0
FR-JR-007	SEO fields per article (title, description, share image) and structured data	P0
FR-JR-008	Newsletter sign-up inside articles and a digest email of new stories	P1
FR-JR-009	Style quiz that saves a style profile to the account and filters recommendations	P1
FR-JR-010	Per-article metrics: views, average read time, product clicks, add-to-bags and sales credited to the article	P0

ID	Requirement	Priority
FR-JR-011	Content calendar view for the Content Editor, with seasonal reminders	P1
FR-JR-012	A glossary page (OG, retro, colourway, GS sizing, quarter-zip) linked from guides, written for newcomers	P1

Tone. Friendly, confident, short sentences, plain English with a little street flavour. Always practical: what to wear, with what, in which size, where to buy it. Written for readers in Ghana first and readable anywhere.

12. Staff dashboard requirements

The dashboard is the working home of the business. It must work well on a phone, because staff in Accra and Kumasi will often be out with suppliers or riders.

Navigation. Dashboard, Orders, Dispatch Board, Catalogue and Sourcing, Customers, Staff and Targets, Money, Analytics, Drip School and Content, Settings, Audit Log. A global search finds an order number, phone number, customer name, SKU, supplier or product. A notifications bell lists alerts. A branch switcher filters by Accra, Kumasi or both.

Role-based home screens.

Role	What the first screen shows
Owner and Admin	Revenue today, this week and this month against target, orders by stage, payments waiting for a check, balances to collect, orders waiting on suppliers, top products, sales by source, delivery performance, team progress bars
Sales Agent	My orders to confirm, my follow-ups, my target progress today and this week, quick Create Order button
Sourcing Officer	Supplier orders to place, items due from suppliers today, availability that has not been checked for 7 days, items that could not be sourced
Dispatch Coordinator	Dispatch Board: columns for To source, Ready to pack, Packed, Dispatched, Out for Delivery, Delivered, Failed. Today's deliveries by region and rider, balances to collect

Role	What the first screen shows
Content Editor	Drafts, scheduled posts, top Drip School articles, banners that expire soon
Support	Open conversations, orders with complaints, cancellations and refunds waiting for a decision
Finance	Payments received, manual MoMo payments to check, balances collected and outstanding, refunds, expenses this month, cash-flow summary

ID	Requirement	Priority
FR-DB-001	Staff sign in with email and password plus a second factor (authenticator app or SMS code). Owner, Admin and Finance accounts must use the second factor	P0
FR-DB-002	Every list (orders, products, suppliers, customers, staff, expenses) has search, filters, sortable columns, a column chooser, saved views and bulk actions	P0
FR-DB-003	Every record page shows a timeline of changes (who, what, when)	P0
FR-DB-004	KPI cards show the number, change versus the previous period, and a small trend line. Clicking a card opens the detail report	P0
FR-DB-005	All dashboard data respects the permission matrix. Users never see menus or numbers they are not allowed to see	P0
FR-DB-006	In-app notifications for new orders, payment checks, supplier delays, stuck orders, balances due and target alerts, with a mark-as-read control	P0
FR-DB-007	Light and dark theme, and a compact table density option	P1
FR-DB-008	Keyboard shortcuts for power users (search, new order, next item)	P1
FR-DB-009	Support inbox: customers can message from their account or the tracking page, staff reply from the dashboard, and the thread is linked to the order	P1

ID	Requirement	Priority
FR-DB-010	Staff profile page with role, branch, start date, targets, history and activity. Pay details live in Money and are hidden from everyone but Owner and Finance	P0

13. Catalogue, availability and sourcing

Drezzy does not hold stock today. It lists what its trusted suppliers can provide and orders from them after a customer pays. This module replaces the Excel product list with one live catalogue that shows, for every size, whether Drezzy can get it, from whom, at what cost and how fast. When staff change availability or price, the storefront reflects it within 5 seconds. The design keeps a switch for held stock, so nothing needs rebuilding if Drezzy starts keeping stock later.

Structure. Products are described the way Drezzy already describes them: name, brand, colours available and sizes available. A Product (for example Nike Dunk) has up to three options: Style (Low, Mid, High, only where it applies), Colour and Size. Each combination is a Variant with its own SKU and selling price. Each Variant links to one or more Supplier Offers: the supplier, their cost price, their availability and their lead time. If two styles are really different shoes with their own photos and story, staff can create separate products and link them as a family instead; one product with a Style option is the default.

Sourcing flow for one order.

1. The customer pays the amount due now. The order appears in "To source".
2. The Sourcing Officer picks the supplier (the preferred one is suggested), places the supplier order and records the agreed cost. The customer's tracker moves to "Getting your item from our supplier".
3. The item arrives at the Accra or Kumasi branch. Staff check size, colour and condition against the order, and attach the supplier invoice or receipt photo.
4. The order moves to "Ready to pack" for dispatch. The supplier cost is posted to Money automatically.
5. If no supplier can provide the item, staff mark it "Could not source", choose the alternative offered or a refund, and the customer is told straight away.

ID	Requirement	Priority
FR-CAT-001	Create and edit products and variants, with images, category, brand, men or ladies, selling price, compare-at price, condition (DEFAULT Brand new, original), tags and status (Draft, Active, Archived)	P0
FR-CAT-002	Availability per variant: Available, Limited, Unavailable or Pre-order (with an expected date), plus the lead time in days. The storefront uses the best available supplier offer	P0
FR-CAT-003	Suppliers: name, contact person, phone, location, products supplied, notes, and whether they are trusted. Each variant can have several supplier offers with cost and lead time	P0
FR-CAT-004	"Last checked" date on every supplier offer, with an alert when availability has not been confirmed for 7 days (editable). Staff can bulk-confirm after a call with a supplier	P0
FR-CAT-005	Supplier orders linked to customer orders: supplier, items, agreed cost, date ordered, expected date, received date, status (Ordered, Received, Partly received, Failed) and the invoice or receipt photo	P0
FR-CAT-006	Import from Excel or CSV using a downloadable template. A preview step shows rows that will be created or updated, and a downloadable error report for bad rows. Nothing is saved until the user confirms	P0
FR-CAT-007	Bulk edit price, availability, lead time, category, status and tags across selected items	P0
FR-CAT-008	Edits made by staff appear on the storefront (price, availability, visibility, delivery time) within 5 seconds, using cache invalidation, not a nightly job	P0
FR-CAT-009	Every change to price, cost or availability is kept in the history with the user, time and old and new values	P0

ID	Requirement	Priority
FR-CAT-010	Catalogue reports: items by availability, items not checked recently, average supplier lead time, margin per item (price minus best cost), items that could not be sourced	P0 (first three), P1 (rest)
FR-CAT-011	Supplier performance: on-time rate, failed orders, average cost change, and a price list import per supplier	P1
FR-CAT-012	Held stock mode: per variant, switch from "sourced on order" to "held in stock", which turns on stock counts per branch, reservations, transfers between Accra and Kumasi, stocktakes and a stock ledger	P2
FR-CAT-013	Permissions: only the Sourcing Officer, Admin and Owner change availability and supplier data. Cost prices are hidden from roles without money access	P0

Excel migration plan. Before launch: (1) clean the current spreadsheet into the import template (columns: SKU, Name, Brand, Category, Men or Ladies, Style, Colour, Size, Selling price, Supplier, Supplier cost, Lead time days, Availability, Image file names); (2) run a dry-run import on staging; (3) call each supplier to confirm what they can supply and mark it checked; (4) freeze edits in Excel on go-live day; (5) import, and keep the spreadsheet read-only for 30 days as a backup.

14. Order management and fulfilment

This module turns the WhatsApp and phone habit into a tracked process, so every order, whoever took it, ends up in one list with an owner, a supplier step and a clock.

Order record. Order number, channel (Web, WhatsApp, Phone, Instagram DM, Walk-in), customer, items, totals, payment plan (full or half), amount paid, balance due, delivery details, payment status, order status, assigned Sales Agent (gets credit), linked supplier orders, assigned Dispatch user, rider or courier, tracking number, notes, tags, and a full timeline.

Payment states: Unpaid, Pending check (manual MoMo), Part paid (half paid, balance due), Paid, Failed, Partly refunded, Refunded.

ID	Requirement	Priority
FR-ORD-001	Orders list with filters (status, payment state, balance due, channel, region, branch, agent, supplier, date, source) and a one-click Export	P0
FR-ORD-002	Create order screen for staff: search or add a customer, add items with live availability and lead time, choose delivery, apply a manual discount with a reason, choose the payment plan allowed for the address, and choose the channel	P0
FR-ORD-003	Order detail with actions: Confirm, Check payment, Place supplier order, Mark received, Pack, Dispatch, Record balance collected, Mark delivered, Cancel, Refund, Reassign	P0
FR-ORD-004	Dispatch Board (kanban) with columns To source, Ready to pack, Packed, Dispatched, Out for delivery, Delivered, Failed. Drag to move, rider assignment, region grouping, and a badge on cards with a balance to collect	P0
FR-ORD-005	Delivery zones and fees table managed by Admin: region, areas, fee or "fee paid to courier on arrival", estimated days, and whether half payment is allowed (DEFAULT: Accra zone only)	P0
FR-ORD-006	Rider and courier records, with phone, region and active jobs. Tracking number and courier name stored on the order. Any courier can be used	P0
FR-ORD-007	Stuck-order alerts: not confirmed after 2 hours, supplier order not placed after 24 hours, supplier late against the expected date, not dispatched 24 hours after receipt, not delivered after the estimated date (all limits editable)	P0
FR-ORD-008	Printable documents: receipt PDF showing amount paid and balance, packing slip, delivery label with QR code linking to the order and the balance to collect	P0
FR-ORD-009	Balance collection: the rider or Dispatch records how the balance was paid (MoMo with reference, or cash), and Finance reconciles cash handed in by each rider	P0

ID	Requirement	Priority
FR-ORD-010	Cancellations and refunds: request, approve or reject with reason, refund to the original MoMo number or card, with the refund recorded in Money	P0
FR-ORD-011	Proof of delivery by customer delivery code or photo	P1
FR-ORD-012	Courier API integration to create shipments and pull tracking status automatically	P1
FR-ORD-013	Returns and exchanges workflow, switched on when Drezzy publishes a return policy	P2
FR-ORD-014	Customer messages and internal notes on the order, with the author and time	P0

Fulfilment timing metrics (feed section 15): time to confirm, time to place the supplier order, supplier lead time (expected and actual), time from receipt to dispatch, time to deliver, on-time rate against the estimate, failed delivery rate, share of orders that could not be sourced.

15. Targets, staff tracking and KPIs

Admins set targets for every stakeholder. The system measures progress automatically from real data where it can, and from short daily check-ins where it cannot, so tracking is fair and does not rely on memory. Attendance and shifts are not tracked.

How targets work.

1. An Admin creates a target: owner (a person, a role, a team or a branch), metric, period (daily, weekly, monthly or custom dates), goal value, and an optional weight.
2. Progress is calculated from system data (for example a Sales Agent's paid order value, a Dispatch Coordinator's on-time deliveries, a Sourcing Officer's supplier lead time) or from check-in numbers (for example Instagram posts published).
3. Each person sees a progress bar and a pace indicator (green, amber, red) comparing the actual to the expected pace for the day of the period.
4. Admins see all progress in one team view, can add comments, and can adjust a target with a reason that is logged.

Starter targets (DEFAULT, for the first 4 weeks). These measure things each role controls. After 4 weeks, the Owner resets the goal numbers to about 10% above each person's real average.

Role	Starter target	Measured from	Why this one
Sales Agent	Paid order value per week (goal set by the Owner) and orders confirmed within 2 hours	Payments and order timeline	Rewards closing sales and speed of reply
Sourcing Officer	Supplier order placed within 24 hours of payment, and orders that could not be sourced under 3%	Supplier orders	Keeps promises to paying customers
Dispatch Coordinator	On-time delivery 90% or more, and balances collected on the day	Delivery timeline and balance records	Protects the customer experience and cash
Content Editor	2 Drip School posts and 5 social posts per week	Published content and daily check-ins	Feeds Drip School and the funnel
Customer Support	Replies within 1 hour in opening hours, 90% of chats	Support inbox (P1), check-ins at launch	Trust and repeat business
Finance	Payments checked within 4 hours, month closed by the 5th	Money module	Accurate money records

Leaderboard. A team ranking can motivate a small sales team, but it can also push people to grab easy orders or stop helping each other. It ships switched off; the Owner can turn it on per team (P1).

Daily and weekly routine.

When	What staff do	What the system does
Start of day	Confirm today's priorities in the Daily Plan (3 to 5 lines)	Shows yesterday's result, today's target and open tasks
During the day	Work orders, suppliers, deliveries, content	Updates progress bars live
End of day	Submit the Daily Report: what was done, blockers, notes	Pre-fills the numbers from system data, flags missing reports

When	What staff do	What the system does
End of week	Review the Weekly Summary	Auto-builds the summary: target vs actual, wins, misses, trend vs last week. Admin adds comments

ID	Requirement	Priority
FR-TG-001	Create, edit, pause and close targets, with history of changes	P0
FR-TG-002	Targets by person, role, team and branch (Accra, Kumasi)	P0
FR-TG-003	Daily Plan and Daily Report forms, with a reminder email or notification if not submitted by a set time	P0
FR-TG-004	Weekly summary generated automatically and emailed to the staff member and Admin	P0
FR-TG-005	Starter target templates per role, loaded from the table above	P0
FR-TG-006	Staff scorecard: target attainment, trend, on-time rate, report completion	P1
FR-TG-007	Pace alerts: notify Admin when someone is below 70% of expected pace by mid-period (threshold editable)	P1
FR-TG-008	Leaderboard per team, off by default, switched on by the Owner	P1
FR-TG-009	Weighted scorecards that combine several targets into one score	P1
FR-TG-010	Targets for partners (riders, couriers, affiliates) with a limited portal showing only their jobs and numbers	P1
FR-TG-011	Commission or incentive calculator linked to targets	P2

KPI catalogue. Each KPI has a definition that developers implement exactly, and each appears on a dashboard card with period comparison.

KPI	Definition	Owner role	How often
Gross sales	Sum of order totals for paid and part-paid orders, before refunds	Owner	Daily
Net sales	Gross sales minus refunds and discounts	Finance	Daily
Cash received	Payments received in the period, including balances collected	Finance	Daily
Balances outstanding	Balance due on part-paid orders not yet delivered	Finance	Daily
Orders	Count of confirmed orders	Sales	Daily
Average order value	Net sales divided by orders	Owner	Weekly
Conversion rate	Orders divided by sessions	Admin	Weekly
Cart abandonment	Carts created but not ordered, divided by carts created	Admin	Weekly
Payment success rate	Successful payments divided by payment attempts	Finance	Weekly
Half-payment share	Accra orders paid half now, divided by all Accra orders	Owner	Monthly
New and repeat customers	First-time vs returning buyers in the period	Owner	Weekly
Repeat purchase rate	Customers with 2+ orders in 90 days divided by customers with 1+ order	Owner	Monthly
Sales by source	Net sales by "how did you get to know Drezzy" answer and by UTM source	Admin	Weekly
Cost per order by channel (P1)	Ad spend recorded in Money by channel, divided by orders from that channel	Admin	Monthly
Time to confirm	Average time from order placed to Confirmed	Sales	Daily
Time to source	Average time from payment to item received from the supplier	Sourcing	Weekly

KPI	Definition	Owner role	How often
Could-not-source rate	Paid orders that could not be sourced, divided by paid orders	Sourcing	Weekly
Fulfilment time	Average time from order placed to Delivered	Dispatch	Weekly
On-time delivery rate	Orders delivered by the estimated date divided by orders delivered	Dispatch	Weekly
Failed delivery rate	Failed attempts divided by delivery attempts	Dispatch	Weekly
Gross margin	(Net sales minus supplier cost of those orders) divided by net sales	Owner	Monthly
Net cash flow	Money in minus money out (supplier costs, expenses, salaries, refunds)	Finance	Monthly
Customer satisfaction	Average 1 to 5 rating from the post-delivery message	Support	Weekly
Content impact	Drip School views, product clicks from articles, sales credited to articles	Content	Weekly
Daily report completion	Reports submitted divided by working days	Admin	Weekly

16. Analytics, sales funnels and marketing attribution

Analytics must answer four questions for the Owner: what sold, who bought, where they came from, and where we lose people. Drezzy currently has under 100 followers on Instagram and TikTok, so early traffic will be small and percentages will swing. The dashboard shows counts next to every rate so small numbers are not misread.

The sales funnel. Visit, product view, add to cart, checkout started, payment started, order placed, paid, delivered, repeat purchase. Each step shows the count and the drop-off from the step before, and can be split by device, source, region, category and product.

Attribution. Two views sit side by side because they often disagree. Tracked source comes from the link a customer arrived by (UTM tags, referrer). Self-reported source comes from the "How did you get to know Drezzy Stores?" answer. A report compares them, for example a customer who arrived by direct link but said "friend or relative".

ID	Requirement	Priority
FR-AN-001	Overview dashboard: sales, orders, AOV, conversion, new vs repeat, top products, top categories, region map, and payment method mix, with date range and compare-to-previous filters	P0
FR-AN-002	Funnel report as described above	P0
FR-AN-003	Source report using both tracked and self-reported source	P0
FR-AN-004	Delivery report: stage times, on-time rate, failed deliveries by region and courier	P0
FR-AN-005	Product and category report: views, add-to-cart rate, sales, margin, return rate, wishlist adds, searches with no results	P0
FR-AN-006	Staff performance report linked to targets (section 15)	P0
FR-AN-007	Customer report: new vs returning, lifetime value, orders by region, top customers, birthdays this month	P1
FR-AN-008	UTM link builder so the Instagram, TikTok, Snapchat and Facebook bio links, and every campaign link, are tagged consistently	P1
FR-AN-009	Reactions with the platform: wishlist adds, review ratings, post-delivery satisfaction, on-site feedback button, and most-searched words	P1
FR-AN-010	Scheduled reports by email (daily sales summary to the Owner, weekly report to Admins) as PDF or link	P1
FR-AN-011	Cohort report showing repeat purchases by first-purchase month	P1
FR-AN-012	Optional connections to Google Analytics 4, Meta Pixel, TikTok Pixel and Snap Pixel, loaded only after the visitor consents	P1
FR-AN-013	All reports can be exported (section 17) and respect the permission matrix	P0

The system stores its own first-party event data (section 24) so the Owner's numbers do not depend on a third-party tool or on ad blockers.

17. Central database, CRM, money records and data export

One database holds every record, and the dashboard lets authorised staff see and search all of it. No data lives only in a spreadsheet or a phone.

Records kept. Customers, staff, partners (riders, couriers, affiliates), suppliers, products and variants, availability and supplier orders, orders and payments, balances, deliveries, refunds, targets and check-ins, salary records, expenses, content, messages, notifications, analytics events, and the audit log.

Customer 360 view. Contact details, addresses, sizes, source ("how did you get to know Drezzy"), all orders and their status, balances due, lifetime value, average order value, last purchase date, wishlist, notes, tags (VIP, wholesale, influencer), consent flags, and message history.

ID	Requirement	Priority
FR-DATA-001	Customer list and profile with search by name, phone, email, region, tag, source, spend and last order date	P0
FR-DATA-002	Staff and partner records with role, branch, contact, status (Active, On leave, Inactive), targets and history. No attendance or shift records	P0
FR-DATA-003	Saved segments, for example "Kumasi customers who bought sneakers in the last 90 days", usable for email campaigns in P1	P1
FR-DATA-004	Merge duplicate customers (same phone number written two ways), with a log of the merge	P0
FR-DATA-005	Export any list or report as CSV, XLSX (Excel) or PDF, and JSON for Admins, with the chosen columns and filters applied	P0
FR-DATA-006	Large exports run in the background, then the user is notified and gets a download link that expires after 24 hours	P0

ID	Requirement	Priority
FR-DATA-007	Export permission is separate from view permission. Every export is logged with user, filter, time and row count. Phone numbers and emails can be masked for roles without export rights	P0
FR-DATA-008	Import customers from CSV (for example contacts from past WhatsApp orders), with duplicate detection and a consent field	P1
FR-DATA-009	Automated daily database backups kept for 30 days, stored in a separate location, with a restore test every quarter	P0
FR-DATA-010	Retention rules: inactive accounts reviewed after 3 years, analytics events aggregated after 24 months, logs kept 12 months (all editable, confirm with legal advice)	P1
FR-DATA-011	A data dictionary page in Settings that lists each record type, its fields and who can see it	P1

Money records. The Money module keeps every cedi going in and out, so the Owner can see cash flow and profit without a separate spreadsheet. It records; it does not move money or pay salaries.

ID	Requirement	Priority
FR-FIN-001	Inflow, recorded automatically: payments at checkout, balances collected on delivery, and payments confirmed manually, each linked to its order	P0
FR-FIN-002	Outflow, recorded automatically: supplier costs from supplier orders, and refunds	P0
FR-FIN-003	Expenses entered by staff: date, category (delivery and riders, ads and promotion, data and airtime, packaging, rent, utilities, software and hosting, other), amount, branch, payment method, note, and a receipt photo	P0
FR-FIN-004	Other money in entered by staff, such as owner top-ups, with a reason	P0

ID	Requirement	Priority
FR-FIN-005	Monthly cash-flow summary by branch: money in, money out by category, net cash flow, balances still to collect	P0
FR-FIN-006	Rider cash reconciliation: cash collected per rider per day against cash handed in, with differences flagged	P0
FR-FIN-007	Salary records: staff member, period, amount, allowances or deductions, date paid, method and reference, and a payslip PDF. Visible only to Owner and Finance	P1
FR-FIN-008	Profit report by month and branch: net sales minus supplier costs, expenses and salaries	P1
FR-FIN-009	Month close: lock a month after review so its figures cannot change without an Owner unlock, which is logged	P1
FR-FIN-010	Budgets per expense category with alerts when spending passes 80%	P1
FR-FIN-011	Export for an accountant or accounting software	P2

18. Notifications and messages

Customers and staff receive the right message at the right moment. Transactional messages (receipts, order updates, security) are separate from marketing messages (newsletters, offers), and marketing always has an unsubscribe link and a consent record.

Channels.

- **Email and in-app (P0).** Email needs Drezzy's own domain to reach inboxes reliably, which is one reason to buy the domain before launch (section 22).
- **WhatsApp click-to-chat links (P0, free).** Buttons open the customer's own WhatsApp with Drezzy's number and a pre-filled message, such as the order number. Staff answer in the WhatsApp Business app as they do today.
- **Automated WhatsApp and SMS (P1).** Order updates sent by the system through the WhatsApp Business Platform and an SMS provider, once Drezzy is registered and order volume justifies the cost.
- **App push (P2).**

Customer messages.

Message	Trigger	Priority
Welcome and verify email	Sign up	P0
Order confirmation and receipt, showing any balance due	Order placed and payment confirmed	P0
Payment received, failed or waiting for a manual check	Payment events	P0
Status updates (confirmed, getting your item, dispatched with rider contact, out for delivery with balance to pay, delivered)	Status change	P0
Item could not be sourced, with the alternative or refund	Sourcing outcome	P0
Delivery feedback request	24 hours after Delivered	P1
Password reset and security alerts	Account events	P0
Refund updates	Finance actions	P0
Available again and price drop	Wishlist rules	P1
Abandoned cart reminder (only with consent)	Cart idle 2 hours	P1
Drop reminder	Customer pressed Notify me	P1
Drip School digest and offers	Marketing schedule	P1

Staff and stakeholder messages.

Message	Trigger	Priority
New order, payment failed and manual payment to check	Order and payment events	P0
Supplier order to place, supplier late, item could not be sourced	Sourcing rules	P0
Order stuck beyond time limit	Rules in FR-ORD-007	P0
Balance to collect today, and rider cash not handed in	Delivery and money rules	P0
Daily report reminder and missed report	Schedule	P0

Message	Trigger	Priority
Target set, behind pace, reached or missed	Target rules	P0 (set, reached), P1 (pace)
Assignment notices (order assigned, delivery assigned)	Assignment	P0
Daily sales and cash summary to Owner, weekly performance report to Admins	Schedule	P1
Export ready, new support message, new sign-in from a new device	System events	P0

ID	Requirement	Priority
FR-NT-001	Email templates are editable by Admin in the dashboard, with variables (name, order number, items, amount paid, balance, link) and a test-send button	P0
FR-NT-002	Branded HTML with a plain-text version, tested on Gmail, Outlook and mobile mail apps	P0
FR-NT-003	Messages go through a queue with automatic retries, and a delivery log shows sent, delivered, bounced or failed per message	P0
FR-NT-004	The sending domain has SPF, DKIM and DMARC set up so mail reaches inboxes	P0
FR-NT-005	Preference centre for customers (section 10) and one-click unsubscribe for marketing	P0
FR-NT-006	In-app notification centre for staff with read and unread state	P0
FR-NT-007	WhatsApp click-to-chat links with pre-filled text on product pages, checkout, order pages and the tracking page, using the Accra or Kumasi number	P0
FR-NT-008	Automated WhatsApp order updates through the WhatsApp Business Platform using approved utility templates, with SMS as a fallback	P1

ID	Requirement	Priority
FR-NT-009	Developers pick the transactional email provider (for example Postmark, Amazon SES or Resend). SMS and WhatsApp providers are chosen in phase 2 after a price check	P0

19. Content management

The Content Editor and Admins can change what customers see without a developer.

ID	Requirement	Priority
FR-CMS-001	Home page builder with reorderable sections: hero banners, category tiles, product rows (New, Best Sellers, manual picks), Drip School strip, reviews strip, promo strip	P0
FR-CMS-002	Banners with image, text, button link, start and end date, and separate mobile and desktop images	P0
FR-CMS-003	Announcement bar with text, link and schedule (for example "Free delivery in Accra over GHS 500", if that becomes a rule)	P0
FR-CMS-004	Collections: manual lists and rule-based lists (for example all Nike sneakers under GHS 500)	P0
FR-CMS-005	Static pages with a simple editor: About, Delivery, Payment options, Order issues and refunds, FAQ, Size Guides, Terms, Privacy	P0
FR-CMS-006	Drip School editor with blocks (heading, text, image, gallery, video embed, product card, quote, Shop the Look)	P0
FR-CMS-007	Media library with folders, tags, automatic resizing and compression, and alt text fields	P0
FR-CMS-008	Draft, preview, schedule and publish, with version history and one-click restore	P0
FR-CMS-009	Testimonial manager: approve, edit for length, or hide customer reviews and screenshots, including the existing Instagram reviews, with a recorded consent flag	P1

ID	Requirement	Priority
FR-CMS-010	Redirects manager and SEO fields on every page	P1
FR-CMS-011	Site settings: logo, colours from the brand tokens, social links, contact numbers for Accra and Kumasi, opening hours	P0

20. Data model

This is a logical model for developers to refine into a database schema. Use a relational database (PostgreSQL recommended). Conventions: unique IDs (UUID), money stored as whole minor units (integer pesewas, 100 pesewas = GHS 1) with a currency field so other currencies can come later, timestamps in UTC (Ghana is on UTC+0, so display time equals UTC), soft delete for records that have history, and created and updated fields on every table.

Entity	Key fields	Relationships
User	id, email, phone, password hash, type (customer, staff, partner), status, 2FA settings, last login	Has one CustomerProfile or StaffProfile
Role and Permission	role name, permission keys per module and action	Many-to-many with StaffProfile
StaffProfile	user, display name, branch, start date, status	Has many Targets, DailyReports, SalaryRecords
CustomerProfile	user, first and last name, birthday, gender, shoe size, clothing size, style tags, source (how did you get to know Drezzy), consent flags, tags, notes	Has many Addresses, Orders, Wishlist items
Address	customer, label, receiver name and phone, country, region, city, area, street, landmark, GPS code, coordinates	Used by Orders

Entity	Key fields	Relationships
Branch	name (Accra, Kumasi), address, phone numbers, active	Used by Orders, Expenses, StaffProfiles
Category	name, slug, parent, image, sort order	Has many Products
Brand	name, slug, logo	Has many Products
Product	name, slug, brand, category, men or ladies, description, condition, status, SEO fields, tags	Has many Variants, Media
Variant	product, SKU, style (Low, Mid, High where used), colour, size, price, compare-at price, sale start and end, availability, lead time, supply mode (sourced on order, held in stock in P2), status	Has many SupplierOffers
Supplier	name, contact person, phone, location, trusted flag, notes, active	Has many SupplierOffers, SupplierOrders
SupplierOffer	variant, supplier, cost price, availability, lead time days, last checked at, checked by, preferred flag	Feeds Variant availability
SupplierOrder	supplier, items, agreed cost, ordered at, expected at, received at, status, invoice or receipt image, staff user	Linked to OrderItems and to an Outflow entry
Cart and CartItem	customer or device id, variant, quantity, price at add time	Becomes an Order

Entity	Key fields	Relationships
Order	number, customer, channel, branch, status, payment state, payment plan (full or half), total, amount paid, balance due, fee, discount, delivery address copy, source answer, assigned agent, notes	Has many OrderItems, Payments, Shipments, StatusEvents
OrderItem	order, variant, name and price snapshot, quantity, supplier order, sourcing outcome	Snapshot so later edits do not change history
Payment	order, kind (checkout, balance, refund), provider (Paystack, manual MoMo, cash), method, reference or transaction ID, amount, status, checked by, raw webhook log	Many per Order
Shipment	order, courier, rider, tracking number, estimated and actual dates, proof of delivery, balance collected and how	Linked to Partner
OrderStatusEvent	order, status, user, time, note	Powers the progress bar
Refund	order, reason, amount, method, approved by, paid at	Posts to Outflow
DeliveryZone	region, areas, fee or fee-on-arrival flag, estimated days, half payment allowed	Used at checkout
MoneyEntry	direction (in or out), category, amount, date, branch, method, linked record (payment, supplier order, refund, expense, salary), note, receipt image, created by	Feeds cash-flow and profit reports
Expense	category, amount, date, branch, method, note, receipt image	Creates a MoneyEntry

Entity	Key fields	Relationships
SalaryRecord (P1)	staff, period, amount, allowances, deductions, paid at, method, reference	Creates a MoneyEntry; Owner and Finance only
RiderCashHandover	rider, date, cash collected, cash handed in, difference, checked by	Rider reconciliation
Coupon (P1)	code, type, value, limits, dates, usage count	Applied to Orders
Drop (P1)	product or variants, release time, cap per customer	Limits OrderItems
Review (P1)	product, customer, order, rating, text, photos, consent, status	Moderated by staff
WishlistItem	customer or device id, variant or product, alert flags	Triggers alerts
Article	title, slug, type, body blocks, author, status, publish date, SEO, tags	Links to Products (Drip School)
ContentBlock and Banner	type, content, schedule, placement, order	Used on the home page
Target	owner (user, role, team or branch), metric, period, goal, weight, status	Has many TargetProgress
TargetProgress	target, date, value, source (system or check-in)	Feeds scorecards
DailyReport	staff, date, plan, summary, blockers, auto numbers	Rolled into weekly summaries
Notification and MessageLog	recipient, channel, template, status, time, error	Delivery history
MessageTemplate	key, channel, subject, body, variables, active	Editable by Admin
AnalyticsEvent	session id, user or device id, event name, parameters, source fields, time	First-party analytics

Entity	Key fields	Relationships
Campaign (P1)	name, UTM values, linked ad spend entries	Used for cost per order
ExportJob	user, type, filters, format, status, file link, expires at	Audited
AuditLog	user, action, entity, old and new values, IP, time	Append only
Setting	key, value, scope	Site, delivery, payment rules, thresholds

Integrity rules. Availability and cost changes are always kept in history. An OrderItem stores a copy of the name and price at purchase. A paid or part-paid Order cannot be deleted, only cancelled or refunded. Every payment, refund, supplier cost and expense creates exactly one MoneyEntry. An order with a balance due cannot reach Delivered until a balance Payment exists or an Admin override is logged. Phone numbers are stored in international format (+233...) and checked for duplicates before a new customer is created.

21. Non-functional requirements

These apply to every feature. Numbers marked DEFAULT are starting points for the developers to confirm against real hosting and traffic.

Area	Requirement
Performance	Storefront pages reach Largest Contentful Paint of 2.5 seconds or less on a mid-range Android phone on 4G. Product listing pages load under 200 KB of JavaScript (gzipped, DEFAULT). API responses under 500 ms at the 95th percentile for normal requests. Images are resized, compressed and served from a CDN
Low bandwidth	Works acceptably on slow mobile data: lazy loading, small first screens, a data saver mode, and retry on flaky connections. Previously visited pages and the cart still open offline
Availability	99.5% monthly uptime target for the storefront and checkout (DEFAULT), uptime monitoring with alerts, and a status message page for planned work

Area	Requirement
Scale	Designed for 5,000 products and 1,000 daily visitors at launch (DEFAULT) with headroom for ten times that traffic without redesign
Security	HTTPS everywhere. Passwords hashed with a modern algorithm (Argon2 or bcrypt). Server-side permission checks on every request. Rate limiting on sign-in, search and checkout. Protection against SQL injection, cross-site scripting and cross-site request forgery. Second factor for staff. Secrets kept outside code. Dependency and vulnerability scanning in the build. Follow the OWASP Application Security Verification Standard level 2 as a guide
Payments	No card details or mobile money PINs are ever stored or handled by Drezzy servers; Paystack's hosted checkout handles them. Webhooks are signature-verified and idempotent. Amounts are checked on the server against the order. Manual MoMo transaction IDs are unique and checked by a person before an order moves on
Money and salary data	Money records and salary records are separate permissions. Salary records are visible only to Owner and Finance, are excluded from general exports, and every view or change is logged
Privacy and law	See below
Accessibility	Aim for WCAG 2.1 AA: colour contrast, keyboard use, screen reader labels, tap targets of 44 px or more, and no meaning by colour alone
Localisation and reach	English only. GHS at launch, with prices stored with a currency so more currencies can be added. Addresses carry a country, phones use international format, and dates are written day-month-year. The structure must allow international shipping and other currencies in phase 3 without a rebuild
Browser and device support	Latest two versions of Chrome, Safari, Firefox, Edge and Samsung Internet. Phones from 360 px wide up to large desktops

Area	Requirement
Reliability	Automatic daily backups, tested restores, error tracking, structured logs, and health checks
Quality	Automated tests for availability, checkout, half payments and balances, payment webhooks, manual payment checks, permissions and exports. End-to-end tests of the main purchase and tracking path. A load test before launch. User acceptance testing by real staff
Delivery process	Separate development, staging and production environments, automated build and deploy, database migrations under version control, and written runbooks for payment, sourcing and refund problems

Ghana data protection (Data Protection Act, 2012, Act 843). The Data Protection Commission requires organisations that collect or process personal data in Ghana to register, and its guidance asks them to renew every two years, appoint a data protection supervisor and publish a privacy policy. The platform will hold names, phone numbers, addresses, order history and staff pay, so Drezzy should register as a data controller before launch, in the owner's name until the business is registered. Product requirements that follow: a privacy policy page, consent boxes for marketing, a data rights page (access, correction, deletion, withdraw consent), collecting only the data needed, security safeguards, and a written procedure to report a breach to the Commission and affected customers. This PRD is not legal advice, so please confirm the current rules with the Commission or a lawyer. Selling to customers in other countries later may bring other privacy laws into play.

22. Technical recommendations

The recommended approach is a custom web platform with one codebase for the storefront and dashboard, shipped first as an installable web app (PWA), then wrapped for the app stores when push notifications and store presence matter. The build route is still the owner's decision (section 27); the three options are below.

Three build routes.

Route	What it is	Strengths	Weaknesses	Fit for Drezzy
A. Custom build (recommended)	Own storefront, own API, own dashboard on PostgreSQL, using managed services for login, database and files	Sourcing on order, half payments, balances, money records, targets and the tracker are built exactly as specified. One data model. No platform fees beyond hosting	Longest build. The team owns maintenance and security	Best match, because most of Drezzy's must-haves are custom on any route
B. Shopify plus custom app	Shopify runs shop, catalogue and checkout. A separate custom app adds targets, money records and reports through Shopify's API	Fastest to a basic shop. Proven checkout and admin	Half payment in Accra, sourcing steps, balances and the 8-step tracker all need custom work or paid apps. Monthly plan and app fees. Two systems for staff to use	Good only if selling online quickly matters more than the dashboard
C. Open-source commerce engine plus custom front end	A headless engine (for example Medusa or Saleor) with a custom storefront and dashboard extensions	Cart, orders and catalogue logic already built. No platform fees	Developers must learn the engine. Paystack and half-payment support must be added and tested	Reasonable if the developers already know one engine

Recommended stack under route A (suggestion, not a mandate).

Layer	Suggestion	Why
Front end	TypeScript with a React framework that supports server rendering (for example Next.js)	Fast product pages, good search engine visibility, one codebase for storefront and dashboard
Back end	The framework's server routes or a TypeScript API (for example NestJS), documented with OpenAPI	Clear modules for orders, sourcing, money, targets and content
Database	Managed PostgreSQL (for example Supabase or Neon), with Redis or a hosted queue for jobs	Strong consistency for orders and money. Full-text search is enough at launch
Files	Object storage with a CDN for product images, receipts and exports	Fast images, cheap storage
Auth	A maintained authentication library or the database provider's auth, secure cookie sessions, 2FA for staff	Avoids homemade security code
Payments	Paystack Starter Business at launch (details below), behind a payment interface so a registered Paystack account, Hubtel or another provider can replace it without rework	Mobile money first
Email	A transactional email provider with an API, sending from Drezzy's own domain	Receipts and tracking emails reach inboxes
Monitoring	Error tracking, uptime checks, log search	Fast fixes after launch

Hosting. The owner wants to start on Vercel or a similar platform. Vercel's own guidelines say the free Hobby plan is for non-commercial personal use only, and they count taking payments or advertising products for sale as commercial, so Drezzy cannot launch on Hobby. Two compliant options:

- **Vercel Pro**, listed at USD 20 a month for the team, with usage credit included.
- **A host whose free plan allows commercial projects.** A Netlify staff member has said its free plan can be used for commercial work (a 2021 forum answer, so check the current terms). Database and email providers' free tiers need the same check.

Domain. Use the host's free address (for example drezzystores.vercel.app or drezzystores.netlify.app) while building and testing. Buy the custom domain before the public launch, because sending email from Drezzy's own name, payment redirect pages and customer trust all depend on it; a .com usually costs far less per year than a month of hosting. A .com.gh needs registered company documents and a Ghana-resident admin contact, so it waits until Drezzy is registered.

Payments while Drezzy is unregistered. Paystack offers a Starter Business for unregistered sellers, including in Ghana. Its Ghana requirements are a government-issued ID, a tax identification number, owner details, and a personal bank account or personal mobile money number for payouts, all in the same person's name. So payouts can go to the owner's personal MTN MoMo number while customers still pay by MoMo or card on the site with automatic confirmation. Limits to plan for: Paystack's help page says Starter payments are temporarily disabled when the business reaches GHS 30,000, and some features such as Transfers are not available until Drezzy registers and upgrades. Until the Starter account is approved, the Manual MoMo option in FR-CO-006 keeps sales going.

WhatsApp. At launch the platform uses free click-to-chat links and the team keeps using the WhatsApp Business app. Automated WhatsApp messages come in phase 2 through the WhatsApp Business Platform (the trade-offs and the timing decision are in section 27).

Web to app path. Build the storefront as a PWA first: a web app manifest, a service worker and a deliberate offline plan. Capacitor's documentation describes first-class PWA support for apps that also run natively on iOS and Android, and one 2026 comparison advises that a PWA is the default for commerce, moving to Capacitor when store distribution or native features are needed. Push notifications, especially on iPhone, are the main reason to add native wrappers later.

Core modules (a modular monolith, split only if needed). Identity and Roles, Catalogue and Sourcing, Cart and Checkout, Orders and Fulfilment, Payments, Money, Customers (CRM), Targets and KPIs, Content (CMS and Drip School), Notifications, Analytics and Reporting, Exports, Audit.

Integrations.

Integration	Purpose	Priority
Paystack	Payments, webhooks, payment links, refunds	P0
Transactional email service	All emails	P0
WhatsApp click-to-chat links	Help buttons and order links	P0

Integration	Purpose	Priority
Google Maps or Places (optional)	Address autocomplete	P1
Courier APIs (Skynet, ShaQ Express, SCS or others, subject to their API availability)	Create shipments and read tracking	P1
SMS provider and WhatsApp Business Platform provider	Automated order updates and OTP login	P1
Google Analytics 4 and ad pixels	Marketing measurement with consent	P1
Capacitor and push service	Store apps and push	P2

Open technical decisions for the lead developer: final framework, hosting provider and plan, database provider, and the courier to integrate first.

23. UI and UX direction

Aesthetic in one line: bold streetwear on Drezzy Navy. The flyers already set the look: a deep navy or light grey background with the DREZZY letters blown up as a tonal watermark, the product on a large rounded white card, a lime badge for the key fact (size, price, NEW), and a navy panel for contact details. The site and app reuse that language so customers recognise Drezzy the moment they arrive from Instagram, TikTok or Snapchat.

Brand colours. Taken from Drezzy's Photoshop design files, so these are the exact values the flyers use. Navy carries the brand, white and grey give room, and lime is the accent that makes things pop. Blue, red and charcoal appear in campaign variants of the flyers and are used sparingly on the site.

Token	Hex	Use
Drezzy Navy (primary)	#00115B	Logo background, header, footer, primary buttons, dashboard sidebar, contact panels
Navy Gradient	#00115B to #0020A9	Contact panels and banners, as on the flyers
Navy Watermark	white letters at about 5% over navy (shows as #0C1B60)	The oversized DREZZY letter pattern on navy backgrounds

Token	Hex	Use
Drezzy Lime (accent)	#9CFF00	Badges (size, NEW, price drop), secondary buttons on navy, highlights, one chart accent. Always paired with navy text or a navy background
Electric Blue (campaign)	#0036FF	Social covers and campaign banners with a lime wordmark
Campaign Red	#A10000	Seasonal flyers such as the red template. Never used for errors on the site
Charcoal	#404040	Panels in the red template, dark interface text
Ink	#0A0A0A	Body text on light backgrounds
White	#FFFFFF	Product cards, text on navy
Flyer Grey	#DEDEDE background, #D5D5D5 image card	Light flyer variant. The app uses #ECECEF and #F5F5F6 for page and card backgrounds
Neutral greys	#E3E4EA, #9A9FB2, #5B617A, #23273A	Borders, secondary text, disabled, dark interface
Success, Warning, Error	#12805C, #B26A00, #C62828	Status only, never decoration

Contrast: white on Drezzy Navy is about 17:1, and lime on navy (or navy on lime) about 13.5:1, both far above the WCAG AA minimum of 4.5:1. Lime on white is only about 1.2:1, so lime text never sits on white or grey. On light backgrounds, lime appears only as a filled badge or button with navy text. Status is always shown with text or an icon as well as colour.

Typography. The design files use two typefaces. The DREZZY wordmark is set in Officer Domenic by Iconian Fonts. On the website it is always used as the logo file (SVG preferred), never typed live, so no web licence is needed for it as long as the logo artwork itself is licensed for commercial use. Supporting text ("Stores", "Contact/Whatsapp", "Size 40") is Neulis Alt by Adam Ladd, a paid typeface; using it on the site needs a webfont licence (open question in section 27). Until then, the site uses Lexend from Google Fonts, the closest free match, which the mockups already use.

Role	Font	Notes
Logo	Officer Domenic, as the supplied logo artwork	Never retyped
Headings and hero statements	Neulis Alt ExtraBold if licensed, otherwise Lexend 700 and 800, uppercase for hero lines, tight tracking on large sizes	Matches the flyers
Body and interface	Neulis Alt Regular if licensed, otherwise Lexend 400, 500, 600, with tabular numbers for prices, tables and dashboards	Readable on small screens
Wide-spaced labels	Same font, letter spacing about 0.6em, as on "Stores"	For small brand labels only
Drip School long reads	Same body font, 16 to 18 px with 1.7 line height	Comfortable reading

Scale (mobile / desktop, in px): Display 36 / 56, H1 28 / 40, H2 22 / 30, H3 18 / 22, Body 16 / 16, Small 14, Caption 12. Prices are 600 weight and slightly larger than surrounding text.

Layout and components. 4 px spacing grid. Product and hero cards with 24 px corners and a soft shadow, as on the flyers; small cards with 12 px corners and 1 px light borders, buttons with 12 px corners and a 48 px minimum height on phones, size chips as rounded squares. Product grid: 2 columns on phones, 3 on tablets, 4 on desktop. Outline icons with a 1.5 px stroke. Motion 150 to 250 ms, with skeleton loaders, and no motion for visitors who prefer reduced motion. The logo tile (white wordmark on navy) is the favicon and the app icon, prepared as a maskable icon for installation.

Photography rules. 4:5 crops, a consistent clean backdrop or the split colour block used on current flyers, at least four images per sneaker (side, front, sole, on foot) and a model or flat-lay shot for outfits (ASSUMPTION). Real customers and real streets in Accra and Kumasi in lifestyle images.

UX principles.

1. **Phone first.** Most Drezzy customers arrive from Instagram, TikTok and WhatsApp on a phone. Design at 360 px wide, then scale up.
2. **Find and size in three taps.** Category, product, size chip, Add to cart. Sticky Add to cart bar on the product page.
3. **Honest scarcity.** "Only 2 left in size 43" shows only when true.

4. **Mobile money first.** MoMo is the first payment option, with a clear prompt explaining what will happen on the phone.
5. **A person is always one tap away.** WhatsApp help on every page.
6. **Show progress.** The tracker is a stepper on desktop and a vertical timeline on phones: completed steps filled in Drezzy Navy with a lime tick, the current step with a ring, future steps grey, each with time and a short line of text.
7. **Plain words.** Friendly microcopy such as "Your bag is empty. Let's fix that." and "Payment prompt sent to your phone. Approve it to finish."
8. **Staff tools are fast and calm.** Dense tables, saved views, keyboard shortcuts, confirmations for destructive actions, and undo where possible.

Key screens: storefront.

Screen	Purpose	Key elements
Home	Inspire and direct	Announcement bar, hero, category tiles, New Arrivals, Drip School strip, reviews strip, delivery promise
Category and search results	Find the right item	Filter drawer, sort, grid, availability tags, active filter chips
Product detail	Convert	Gallery, price, style, colour and size chips with availability, delivery estimate, Add to cart, WhatsApp ask, size guide, related and Shop the Look
Cart drawer	Review	Items, fee estimate, promo, Checkout button
Checkout	Pay	Accordion steps, MoMo first, "How did you hear about us", order summary
Order confirmation and tracking	Reassure	Order number, tracker bar, support link
Drip School home and article	Educate and sell	Featured story, tabs, product cards inside articles
My Drezzy	Return and reorder	Orders, wishlist, sizes, addresses
Drops calendar (P1) and style quiz (P1)	Retain and personalise	Calendar, notify me, quiz results page

Key screens: dashboard.

Screen	Purpose	Key elements
Role home	Start the day	KPI cards, alerts, targets, task lists by role
Orders list and detail	Run sales	Filters, status chips, timeline, actions, notes
Create order	Capture WhatsApp and phone sales	Customer search, items with live availability and lead time, delivery, payment link
Dispatch Board	Move parcels	Kanban by stage, rider assignment, map or region grouping
Products and variants	Manage catalogue	Table, bulk edit, variant grid by size
Catalogue and sourcing	Keep availability honest	Availability per size, suppliers, cost, lead time, supplier orders, import
Customers and 360 profile	Know the customer	Orders, source, value, tags, notes
Staff and Targets	Manage people	Target setup, progress bars, daily reports, weekly summary
Analytics	Decide	Overview, funnel, sources, products, delivery, staff
Content	Publish	Home builder, banners, Drip School editor, media library
Settings	Configure	Roles, delivery zones, email templates, payments, integrations, audit log
Money	Know the cash	Money in and out, expenses with receipts, balances to collect, rider cash, salaries (Owner and Finance only)

Wireframes and first mockups of the key screens are in the Drezzy Stores Key Screens canvas: storefront home, product, checkout, order tracking and Drip School article on a phone, and the owner home, dispatch board, catalogue and sourcing, money, and staff targets screens of the dashboard. Numbers on the dashboard screens are sample data.

24. Analytics event tracking plan

Event names follow the widely used GA4 style so they can be forwarded to Google Analytics and ad pixels later. Every event also carries: session id, user or device id, page, device type, region (if known), and the source fields utm_source, utm_medium, utm_campaign and referrer, captured on arrival and kept for the session. Visitors who decline analytics consent are counted only in anonymous, aggregate form.

Event	When it fires	Main parameters
page_view	Any page opens	path, title
view_item_list	A category, collection or search results list shows	list name, items, filters used
search	Visitor searches	search term, result count
view_item	Product page opens	product id, variant, price, category, availability
select_size	Size chip chosen	product id, size, availability
add_to_cart and remove_from_cart	Cart changes	product id, variant, quantity, value
add_to_wishlist	Wishlist heart pressed	product id
begin_checkout	Checkout opens	cart value, item count
add_shipping_info	Delivery step done	region, fee, method
add_payment_info	Payment method chosen	method (MoMo network, card, manual MoMo) and payment plan (full or half)
source_answer	"How did you hear about us" answered	answer, referrer name or code if given
payment_failed	Payment fails or times out	method, reason code
purchase	Payment confirmed	order id, value, items, source answer, channel
order_status_view	Tracking page opens	order id, current step
whatsapp_click	WhatsApp button pressed	page, product id if any, location number used
article_view and article_product_click	Drip School article opens, product card pressed	article id, product id, read depth

Event	When it fires	Main parameters
quiz_complete (P1)	Style quiz finished	style result
sign_up and login	Account events	method
newsletter_subscribe	Email form submitted	placement
notify_me (P1)	Notify me pressed on a sold-out size or drop	product id, size
pwa_install and notification_opt_in	App installed, notifications allowed	platform
referral_used (P1)	A referral code is applied	code owner id

Staff-side events (stored for the audit log and performance reports, not for marketing): order created, status changed, availability changed, supplier order placed, item received, balance collected, payment checked, expense recorded, target changed, report submitted, export requested, login.

25. Roadmap, milestones and sprint outline

The MVP is planned at about 16 weeks from kickoff to public launch with a small team (DEFAULT: a product owner, one designer, two full-stack developers and a part-time tester). Developers should re-estimate after reading this PRD. Sprints are two weeks.

Phase	Weeks	Focus	Exit check
0. Discovery and design	1 to 2	Owner decisions in section 27, final mockups, clean the Excel product list and supplier details into the import template, apply for the Paystack Starter Business and Data Protection Commission registration, choose the hosting plan	Signed-off designs, import template filled, accounts applied for
1. MVP build, sprint 1	3 to 4	Project setup, environments, database, authentication, roles and permissions, audit log, design system	Staff can sign in with the right permissions

Phase	Weeks	Focus	Exit check
1. MVP build, sprint 2	5 to 6	Catalogue, categories, variants, suppliers and supplier offers, availability and lead times, Excel import	Real product list imported on staging and checked with suppliers
1. MVP build, sprint 3	7 to 8	Storefront pages, search, cart, checkout with payment rules (full, half in Accra), Paystack payments, manual MoMo check, "how did you get to know" question	A test customer in Accra can pay half by MoMo, and one in Kumasi must pay in full
1. MVP build, sprint 4	9 to 10	Orders, staff-created orders, supplier orders, dispatch board, balances, tracker and public tracking page, email templates and queue	An order can be followed from placed to sourced to delivered with emails and a balance collected
1. MVP build, sprint 5	11 to 12	Money module (inflow, outflow, expenses, rider cash, cash-flow summary), refunds	Owner sees a correct month of test money records
1. MVP build, sprint 6	13 to 14	Targets, daily reports and weekly summaries, KPI dashboards, funnel and source reports, Drip School and CMS, exports	Owner can set a target and see live progress and reports
1. Hardening and launch	15 to 16	Performance and security checks, load test, user acceptance testing with staff, supplier availability check, data migration, domain and email set-up, soft launch to existing customers	Launch checklist passed

Phase	Weeks	Focus	Exit check
2. Retention and automation	17 to 26	Salary records and profit reports, automated WhatsApp and SMS updates, coupons, loyalty and referral, limited drops, reviews, style quiz, Shop the Look, partner portal, pace alerts, scorecards and leaderboard switch, courier APIs, supplier performance	Repeat purchase rate and on-time delivery visible and improving
3. Apps and worldwide	27 onwards	Capacitor builds for Android then iOS, push notifications, international shipping and other currencies, held-stock mode, AI stylist, visual search	Apps live in the stores; first international order

Launch checklist (MVP). Paystack account live and tested with real small payments from all three mobile money networks and one card, with payouts reaching the MoMo number. Manual MoMo fallback tested. Half-payment and balance flow tested end to end in Accra. Supplier availability confirmed for every live product. Custom domain bought and email domain verified (SPF, DKIM, DMARC). Hosting on a plan that allows commercial use. Privacy policy, terms, delivery, payment options and order issues pages published. Data Protection Commission registration submitted. Backups running and one restore tested. Staff trained, with a one-page guide per role. Analytics events verified in a test purchase. A rollback plan written.

Soft launch plan. Invite existing WhatsApp customers first, keep staff-created orders running in parallel for two weeks, collect feedback through the site button, fix, then announce on Instagram, TikTok and Snapchat with the new bio link.

26. Risks, assumptions and dependencies

Risk	Why it matters	Mitigation
A supplier cannot provide an item after the customer has paid	The customer has paid in full or in half and expects delivery	Availability must be checked regularly (FR-CAT-004), a preferred and a backup supplier per popular item, and a clear alternative-or-refund flow (FR-CO-011)
Payment limits while unregistered	Paystack Starter payments are paused at GHS 30,000, and some features need a registered business	Track the running total on the Money screen, start business registration early, keep Manual MoMo as a fallback
Money in a personal MoMo wallet	Business and personal money mix, and wallet limits may apply	Record every inflow and outflow in Money from day one; move to a business account after registration
Customers keep ordering on WhatsApp	Habit is strong and the platform may be bypassed	Keep WhatsApp buttons, let staff create orders in seconds, share payment links, and track channel so the shift is measured
Balances not collected on delivery in Accra	Half payments leave cash at risk	The order cannot close without the balance recorded, riders reconcile cash daily, and outstanding balances show on the Owner's home
Mobile money payments stay pending or fail	Lost sales and angry customers	Webhook-driven confirmation, retry paths, clear messages, and a staff view of pending payments
No return policy yet	Customers paying before delivery will ask what happens if the size is wrong	Publish a short "Order issues and refunds" page at launch covering wrong, faulty or unsourced items, even before a full return policy

Risk	Why it matters	Mitigation
Hosting terms	Free plans on some hosts forbid commercial use	Launch on a plan that allows commercial use (section 22)
Scope creep	The wish list is large and the MVP could stretch indefinitely	Phases in section 7, change requests decided by the Owner against the P0 list
Data protection non-compliance	Legal exposure and loss of customer trust, especially with staff pay records	Register with the Data Protection Commission, privacy policy, consent, data rights page, breach procedure, tight access to salary data
Name and handle conflicts	Several unrelated businesses use "Drezzy" or "Drezily"	Secure the domain and matching handles soon, and consider a trademark check
Delivery quality	The brand is judged on the last mile, and delivery depends on riders and couriers	Use more than one courier, record on-time rate per rider and courier, set clear delivery windows
Staff resistance to tracking	Targets can feel like surveillance	Explain the purpose, show staff their own numbers first, keep the leaderboard off by default, review targets together
Low early traffic	Funnel percentages will be noisy with small numbers	Show counts beside rates, gather feedback directly, invest in Drip School and social posting after launch
Content workload	Drip School needs steady writing and photos	A simple monthly content calendar, reuse Instagram and TikTok material, assign a Content Editor
Proof of authenticity	Customers and payment providers may ask for proof that items are original	Keep supplier invoices or receipts on every supplier order (FR-CAT-005)

Assumptions (marked DEFAULT in the text) can be changed by the owner at any time: launch goal numbers, team shape, traffic scale, performance budgets, the Accra zone boundary, delivery fee handling, and the starter targets.

Dependencies: an approved Paystack Starter Business (or later a registered one), a hosting plan that allows commercial use, a custom domain and email sender before public launch, supplier confirmations for live products, rider and courier arrangements, product photography, and Data Protection Commission registration.

27. Open decisions

All earlier questions have been answered and folded into the sections above. These decisions remain. Developers build the default until the owner decides.

#	Decision	Options	Default until decided
1	Build route	A custom build, B Shopify plus custom app, C open-source engine (section 22)	A, custom build
2	Hosting plan for launch	Vercel Pro, or a host whose free plan allows commercial use	Decide in phase 0; never Vercel Hobby for the live shop
3	When to buy the custom domain	Before the public launch, or after	Before the public launch
4	Paystack Starter Business in the owner's name, paying out to the personal MTN MoMo number	Yes, or stay on Manual MoMo only	Yes, with Manual MoMo until it is approved
5	Automated WhatsApp messages	Phase 2 through the WhatsApp Business Platform (paid per template message, needs a provider, works best after business registration), or keep click-to-chat only	Phase 2, after registration
6	Leaderboard	On for sales staff, or off	Off
7	Neulis Alt on the website	Buy a Neulis Alt webfont licence, or use Lexend	Lexend

#	Decision	Options	Default until decided
8	Logo font licence	Confirm Officer Domenic was licensed for commercial use when the logo was made	Assume yes; designer to confirm

28. Appendix

A. MVP acceptance criteria

A feature is done when it meets its criteria, passes automated tests, has been checked on a mid-range Android phone and a desktop browser, and has been shown to a real staff member.

ID	Given, when, then
AC-01	Given a customer in Kumasi with items in the cart, when they reach payment, then only "pay in full" is offered, and after approving MTN MoMo on their phone the order shows Payment confirmed within 30 seconds and a confirmation email arrives
AC-02	Given a customer with an Accra address, when they choose "pay half now", then the receipt, tracker, packing slip and rider job all show the balance due, and the order cannot be marked Delivered until the balance is recorded or an Admin overrides with a reason
AC-03	Given a MoMo prompt that is not approved in time, when the payment fails, then the customer sees Retry and Try another number, and the order and cart are kept
AC-04	Given a Manual MoMo payment with a transaction ID, when Finance confirms it against the statement, then the order moves to Payment confirmed; a second order using the same transaction ID is rejected

ID	Given, when, then
AC-05	Given a paid order, when the Sourcing Officer places the supplier order, then the customer's tracker shows "Getting your item from our supplier" with an expected date, and the supplier cost appears in Money when the item is received
AC-06	Given a paid order whose item no supplier can provide, when staff mark it "Could not source", then the customer is told at once and offered the alternative or a refund, and a refund is recorded in Money
AC-07	Given the Sourcing Officer changes availability or price, when they save, then the storefront shows the new value within 5 seconds
AC-08	Given an Excel file with 200 rows and 5 errors, when it is uploaded, then a preview lists rows to create, update and fail, nothing is saved until confirmed, and an error report can be downloaded
AC-09	Given an order, when staff move it to Dispatched with a rider, then the progress bar updates, the time and staff name are recorded, and the customer gets an email with the rider's name and phone
AC-10	Given the public tracking page, when someone enters an order number with a wrong phone number, then no order details are shown
AC-11	Given web checkout, when the "How did you get to know Drezzy Stores?" answer is empty, then the order cannot be placed, and the answer appears on the order, the customer profile and the source report
AC-12	Given a weekly sales target for a Sales Agent, when one of their orders is paid, then their progress bar and pace indicator update immediately
AC-13	Given staff who have not submitted the Daily Report by the cut-off time, when the time passes, then they and the Admin are notified and the report is flagged as missing

ID	Given, when, then
AC-14	Given an Admin or Sales Agent, when they open Money, then salary records are not visible and the server rejects direct requests for them
AC-15	Given an expense with a receipt photo, when Finance saves it, then it appears in the month's cash-flow summary under its category and branch
AC-16	Given an Admin, when they export customers as CSV, XLSX or PDF with filters, then the file matches the filters, a link is delivered, the export is logged with row count, and the link expires after 24 hours
AC-17	Given a guest who bought before, when they sign up with the same phone number or email, then their past orders appear in My Drezzy

B. Glossary

Term	Meaning
MoMo	Mobile money, such as MTN MoMo, Telecel Cash and AirtelTigo Money
Manual MoMo	A customer sends money directly to Drezzy's MoMo number and enters the transaction ID, which staff check by hand
Paystack Starter Business	Paystack's account type for sellers who are not yet registered businesses, with a payment limit
Sourced on order	Drezzy orders the item from a supplier only after the customer pays
Supplier offer	One supplier's cost, availability and lead time for one variant
Lead time	Days a supplier needs to get an item to the Drezzy branch
Half payment	Accra option: half of the order total at checkout, the other half on delivery
Balance	The amount still to be paid on delivery

Term	Meaning
PWA	Progressive web app: a website that can be installed on a phone and works like an app
SKU	Stock keeping unit: the unique code of one product variant, for example one size and colour
Variant	One style, colour and size of a product
Webhook	A message a payment provider sends to Drezzy's server when a payment changes status
Idempotent	Safe to receive twice without doing the action twice
UTM	Tags added to a link to show where a visitor came from
AOV	Average order value
RBAC	Role-based access control: what you can see and do depends on your role
Drop	A release of new or limited items at a set date and time
Drip School	Drezzy's style and education hub (articles, guides, trends)

C. Sources

Facts about Drezzy come from the Instagram, TikTok and Snapchat screenshots and design files you supplied, and from the owner's answers. Facts about other platforms come from the pages below, reviewed through search extracts. Developers should reopen a page before depending on prices, fees or policies, because these change.

Ghana: Jumia Ghana shipping, JumiaPay, Jumia seller delivery, Jumia pickup station explainer, Sneakers Don, Shopwice, Decathlon Ghana delivery, TikTok sneaker sellers in Ghana, Hubtel.

Africa: Bathu, Shopify case study on Bathu, KEEXS profile.

Global: GOAT app, Nike SNKRS, Culture Kings, Culture Kings in Melbourne, Highsnobiety retail closure, Highsnobiety content and commerce, Zalando Shop the Look, Zalando app, Stitch Fix how it works, Stitch Fix Style Shuffle, Shopify inventory, Shopify staff roles.

Payments, delivery, law and technology: Paystack channels in Ghana, Paystack mobile money, Skynet Express, ShaQ Express, SCS Delivery, Data Protection Commission registration, Data Protection Commission for organisations, Capacitor and PWAs, PWA vs Capacitor vs native in 2026.

Payment policy: Paystack ineligible businesses.

Hosting, payments, domains, fonts and WhatsApp: Vercel fair use guidelines, Vercel pricing, Netlify forum answer on commercial use, Paystack business types, Paystack Starter requirements, NIC Ghana .gh domain policy, Neulis on Fontspring, Officer Domenic listing, WhatsApp Business Platform pricing, 360dialog messaging limits. Colours and fonts in section 23 were read directly from Drezzy's Photoshop files.
